

Aveanna's ABA Therapy provides the most current, best practices in education and behavioral health to address the needs of children everywhere, no matter what those needs might be.

We believe in a research and data-based approach and are experts at implementing empirically validated techniques such as intensive teaching, natural environment training, discrete instruction, pivotal response training, structured activities and routines, sign language, picture exchange communication systems and play-based instruction, and social skills instruction. All programs are created with a carefully designed balance between naturalistic strategies and intensive teaching. Everything we do is personalized to the child.

## Our Primary Services

We connect with families and students to support their progress—regardless of where they are today. For some children, learning skills to increase adaptive behaviors or reducing challenging behaviors is the target. For other students, the aim is to increase skills overall. We believe in helping children reach their goals—whatever those may be. One of the ways that we do this is by hiring exceptional staff to work with our kids. Our fun, smart, and compassionate staff members set us apart and are the key to our success.

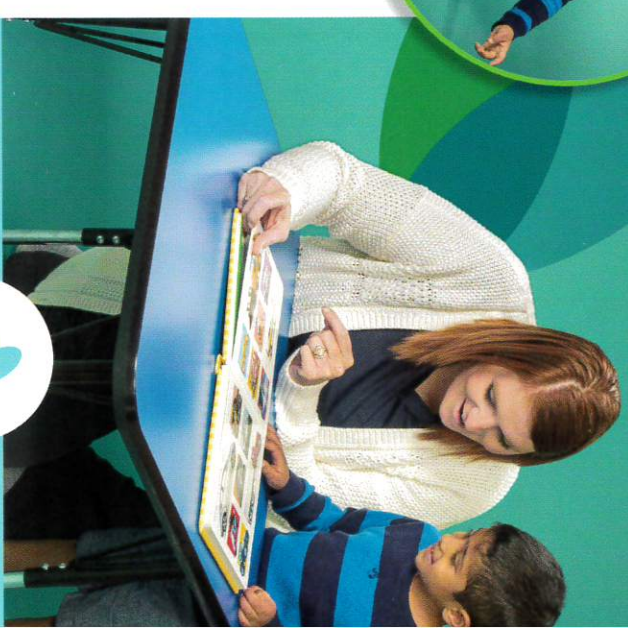

## Autism Services

Our staff consists of highly qualified and experienced Behavior Analysts and Therapists. Aveanna's Autism programs offer services to increase language, academic and functional living skills, social skills, and also to reduce problematic behaviors that interfere with quality of life.

## Applied Behavior Analysis

We offer ABA programming in the home, school, and community. We employ highly qualified Behavior Analysts and Behavior Therapists who deliver and implement Applied Behavior Analysis programs at home, in the school, and in the community. We offer behavior acquisition programming (increasing skills) as well as behavior reduction programming (reducing or eliminating problematic behaviors).

## Early Intervention

We offer intensive EI service for children from birth to age five. We focus on communication using ABA principles, preschool and learning readiness, and reduction of problematic behaviors. We offer families a cohesive system of in-home or pre-school education and behavior management to maximize basic learner skills and facilitate progress.

## Funding

Funding for services can come from a variety of sources including Medicaid, private insurance, school, and private payment. By accessing each level of service, both through medical funding and consultation for educational programs, Aveanna maintains a strong continuity and consistency of care.

*We realize that navigating the funding environment for your child care can be overwhelming at times. We are here to help!*
